Mr. Karl Struss,
1405 Stanley Ave,
Hollywood, Calif.

Dear Mr. Struss:

could you find time to write something for Camera Craft on the Subject of pictorial photography and illustrate the article with some of your own photographs. They may be both of figure subjects and landscapes, something to show the work of your lens to advantage.

I will announce that the pictures were made with a Struss lens and if you will fix up a readable article it should prove a good advertisement for you.

Write a technical article on your methods of working. Tell us what plates and developer you favor. Say something about color screens. Also about length of focus for certain popular sized plates for pictorial results. These remarks are offered as suggestions. We have a lot of amateur readers who will be greatly interested in an article of this sort. I hope you will favor them.

I should like you to send me a few photographs to select three or four from for engravings. All the pictures will be returned to you when I have done with them, and complimentary copies of Camera Craft will be forwarded you in acknowledgement of your courtesy.

Hoping to hear from you in the near future,

Cordially yours,

Edgar Fellows
Associate Editor.
