Laura Gilpin, Photographer
614 Alameda Rd.
P.O. Box 1173
Santa Fe, N. M.

Dear Madam:

In answer to your inquiry, we are enclosing descriptive literature and testimonials on our Spa, W-5 and W-8 units. If you should wish additional information, please write us.

The Spa filter is, as you will note by the enclosed literature, only a small filter to be used to filter drinking water from your faucet. The W-5 unit is a filter that can be put into the line and will filter from 50 to 150 gallons before a refill. The W-8 is another in-a-line filter which will filter from 200 to 400 gallons before a refill.

The price of the Spa filter, including the faucet adapter and one dozen filter pads is \$18.75, parcel post prepaid. The additional filter pads are \$2.00 per dozen, postage prepaid. The W-5 is listed at \$31.50 and the W-8 at \$51.50 fob Mundelein, Illinois.

The Spa filter is shipped on an unconditional guarantee. If, after 30 days from date of shipment you wish to return the filter, the full purchase price (less Parcel post charges) will be refunded at once. If you will enclose your check with your order, you will save the C.O.D. charges.

In addition we manufacture 14", 18", and 33" units with capacities of from 200 to 10,000 gallons per hour priced from \$260.00 up.

Thank you for your interest in our filters. We are looking forward to the pleasure of serving you in the near future and will fill your order promptly and carefully.

Very truly yours,

SPARKLER MANUFACTURING COMPANY

SPARKLER MANUFACTURING COMPANY
MUNDELEIN, ILLINOIS

Gentlemen:

Having used your SPA Water Filter for many years we feel qualified to endorse the use of this filter and to add our highest recommendations for use in clarifying water.

The simplicity of use and the expedient manner in which the water is filtered adds much to its value and positively insures the removal of all sediment from the water.

It has proved to be most economical, in fact the actual cost of operation is the cost of the filters and we have found them so inexpensive that we only use one filter to each 5 gallons of water filtered.

When the lake is a little "rough" we note that water drawn from the "tap" often has a cloudy appearance and when passed through the filter it is sparkling clear. Examination of the filter shows a "muck" and slimy sediment which is removed from the water through the filtering process.

After filtering, we invert the five gallon bottle in a Frigid Air cooling unit and enjoy excellent drinking water—free from sediment. Prior to the purchase of the SPA Filter we were serviced with Spring water and this was quite expensive—even in a small plant.

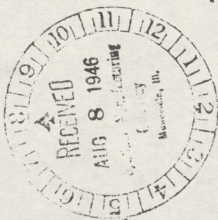

We save the cost of the filter, many, many times over every year so you can understand why we are doubly enthusiastic. We believe that a SPA Filter should be in every home as a guardian to health.

Very truly yours,

Dr. Pierre Chemical Co.

Gentlemen:

As a constant user of your SPA Water Filter since 1937, you will be interested in knowing that this has been one of the best investments ever made as a safeguard to good health. We have as a constant reminder, for proof of this statement, the evidence before us on the filter pad each time we filter our water, which should eliminate any doubt as to the need for filtering water.

Many of our friends have purchased your filter on our recommendation and they, like ourselves, are among your satisfied users.

Wishing you every success, I remain

Yours very truly,

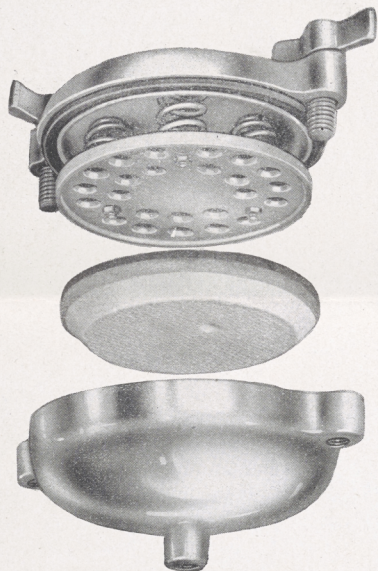

J. J. Devick

The SPA

*for
the finest tasting water
from your own faucet*

The SPA, open, showing simple construction and assembly

INSTALLATION: The Filter is equipped with a removable adapter to fit most faucets. This adapter can be quickly and firmly attached to the faucet and the filter screwed on and off by hand. The adapter interferes in no way with use of the faucet when the filter is detached.

The Spa

What it is

The solid bronze, chrome-plated body is designed to hold a patented, pre-formed Spa pad composed of finely powdered, activated carbon and firmly pressed fibre base. When the two halves are clamped together by means of the wing-bolts, a constant pressure on the pad is maintained.

The Spa is simple to install, easy and inexpensive to clean and operate, is built of solid, everlasting bronze, hard chrome-plated for beautiful appearance. It is a decorative, efficient addition to the finest kitchen or bathroom.

How it works

The Spa is so designed that when it is properly attached to the faucet, the ordinary water pressure in the pipes forces the water through the pad. Every drop of water from your faucet passes through the dense, uniform filter media. The finely powdered, activated carbon particles absorb all chlorine and other bad odors, off tastes and colors, while the fibre base traps all pipe moss, algae, other plant or animal micro-organisms and suspended solid matter.

Water from any faucet comes through the Spa clear, sparkling, and pure.

What It Will Do

- Remove all chlorine (free chlorine or compounds).
- Remove 95 to 100 percent of all off tastes and odors.
- Remove all color. Will produce diamond-clear water.
- Remove all suspended particles: pipe rust or other mineral matter; organic material (algae, etc.) down to and including micro-sized particles.
- Reduce turbidity to zero.

Taste is the Test

Your health department makes your drinking water safe. The Spa makes it **taste good!**

Water may be perfectly safe to drink and yet be unpleasantly cloudy or odorous. Even the most rigidly supervised water supply may pick up undesirable material ("pipe moss", rust, etc.) on the way to your faucet.

The Spa removes all substances which make water unpalatable but does not affect dissolved minerals, which give character to the water. Spa-filtered water is pure but not flat or tasteless. It is sparkling, crystal clear in your glass—and it tastes as good as it looks.

Your taste is the test: how long is it since you have really **enjoyed** a glass of water?

The SPA gives you pure, delicious water from any faucet.

The SPA in Home, Office, Laboratory

Medical authorities advise most people to drink plenty of water. Try keeping a container of Spa-filtered water in your refrigerator; your family will enjoy drinking it. Note the improved taste of coffee, tea and ice cubes made with Spa-filtered water. Use it for cooking fresh vegetables; it will enhance their delicate flavor.

Pure water is most important for home use, especially for the children and the sick. The Spa quickly

and inexpensively removes impurities from your water supply.

In the laboratory, pure absolutely clean water is often essential when distilled water may not be necessary. The Spa delivers this fine quality water conveniently and economically from any faucet.

In the office, the Spa with hose attachment is used to filter water from the faucet directly into the water cooler.

What It Will Not Do

- Will not sterilize water.
- Will not remove minerals in solution.
- Will not remove tastes due to minerals in solution.
- Will not soften water.
- Will not filter indefinitely without cleaning.

SPA users say:

As a constant user of your SPA Water Filter since 1937, I am sure you will be interested to know that this has been one of the best investments we ever made as a safe-guard to good health. As a constant reminder, we have the evidence before us on the filter pad each time we change it; this surely eliminates any doubt as to the need for filtered water.

Many of our friends have purchased your filter on our recommendation and they, like ourselves, are among your satisfied users.

A home-owner*

Having used your SPA Water Filter for many years, we feel qualified to endorse it highly. The simplicity and ease of operation add much to its value. Water from the tap often has a cloudy appearance; when passed through your filter, it is sparkling clear. Examination of the filter pad shows a mucky, slimy sediment which has been removed by filtration.

We are doubly enthusiastic because the SPA has proved to be economical; we save the cost of the filter many times over every year.

A firm of manufacturing chemists*

We have used the SPA for a number of years (your records will show that we have been buying refills for many years) and so far have never seen anything that could take the place of this little filter-purifier.

filtration is our business • • • • •

For many years our larger Sparkler Horizontal Plate Water Filters have been cleaning and purifying water for swimming pools, restaurants, hotels, dining cars, soft drink bottlers and food processors. Sparkler Water Filters in a complete range of sizes are operating efficiently in photographic and chemical laboratories, photo-engraving and lithographing plants, greenhouses—wherever a constant supply of pure, clean water is required.

Our filters save industry many dollars by preventing maintenance trouble before it occurs; as an example, in many industries where water sprays are in constant use, Sparkler filtration keeps nozzles from clogging.

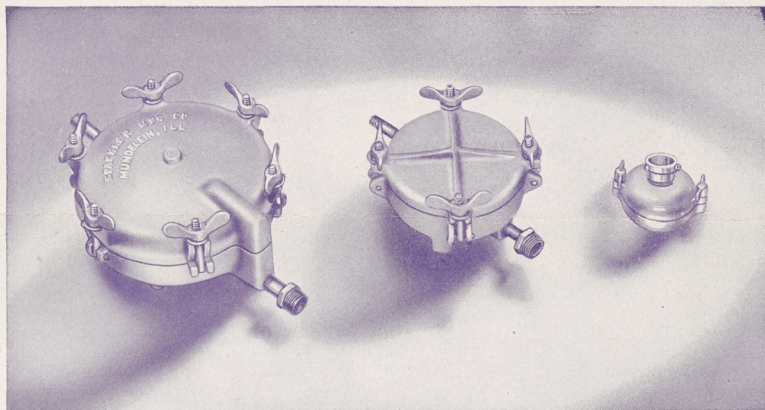

Sparkler engineers are called upon to specify filtration equipment to handle 60 to 10,000 gallons per hour and up. Sparkler's outstandingly efficient design principle, plus years of filtration experience, qualifies us to solve successfully many varied filtration problems.

ENGINEERED FILTRATION

Sparkler Water Filters

for Photographic Laboratories

High Quality, Dual Purpose Filters -- Built to Last
Inexpensive to Operate--Easy to Install

Model W-8-2

Model W-5

The SPA

SPARKLER-filtered water is completely free from the tiniest particles of sand, grit or rust. Subvisible suspended matter is no longer a danger in washing finegrained negatives and prints. U. S. Army Airforces Photo-Reconnaissance units found Sparkler units an easy, inexpensive way to avoid stains, scratches and irregularities resulting from an impure or dirty water supply.

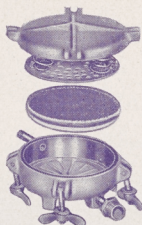

REFILLS: New papers or pads are easily installed; the used paper is discarded. Filter papers are inexpensive and cost of operation is therefore low.

We carry a stock of pads and papers cut to fit these filters, and ship them on order.

The SPA was designed specifically to produce pure and delicious drinking water of crystal clarity. This beautiful, chrome-plated little filter—a most attractive addition to any kitchen—removes not only the smallest particles of sand, grit, rust, etc. but also off tastes, odors, colors, free chlorine and all suspended matter.

For the smaller photographic laboratory, the Spa is ideal as a water filter.

MODELS W-5 and W-8 are used in larger photographic laboratories. Plain filter paper discs used with these filters efficiently remove subvisible particles of sand, grit, rust and all suspended matter. For filtering drinking water, our preformed pads are recommended.

SIZES and CAPACITIES

MODEL	GALLONS PER MINUTE	GALLONS BEFORE REFILL	SHIPPING WT. (LBS.)	OVERALL DIAMETER
SPA	1/2	15 - 40	3 1/2	4 IN.
W-5	1	50 - 150	11	5 IN.
W-8-2	3	200 - 400	20	9 IN.

CONSTRUCTION: Built of solid bronze, Sparkler Water Filters are rust and corrosion-proof. Tested for 100 lbs. pressure per square inch, they are recommended for use in lines carrying 10-75 lbs. pressure p.s.i.

INSTALLATION: Models W-5 and W-8 can be connected to your faucet with ordinary hose or permanently piped into the line.

The Spa is equipped with adapter which attaches conveniently and firmly to the faucet. The filter itself can be easily removed and replaced by hand, as desired.
