Dear Sirs:-

Last year you made postcards for the Ghost Ranch at Abiquiu, New Mexico from Ektachrome transparencies of mine. I enclose a sample card of theirs for identification.

I have several clients who are requesting postcards in smaller quantities than the regular post card concerns will deliver, and I understood from Mr. Vance of the Ghost Ranch that you would supply cards in lots of 1000 copies each.

Will you kindly send me your quotation on such cards, and also the approximate time from your receipt of transparencies to delivery date. Also can you make cards from  $2\frac{1}{2} \times 3\frac{1}{4}$  transparencies? I use a Kodak Medalist for projection transparencies and they are extremely sharp and a proportion that better fits post card size than  $4 \times 5$ .

I enclose also some black & white cards which I have long had on this western market. I am considering putting out some similar sets in color, and this may work into a considerable sale.

Thanking you for full information on your present work in this line, I am

Very truly yours,
