The Weston Electrical Instrument Corp.
Service Division
2530 Polk St.,
Union, New Jersey.

Gentlemen:-

On May 16th of this year, the Santa Fe Book & Stationery Co, Photographic Div. sent in my Weston Exposure Meter (III) to have a new glass put in the window. Their purchase order No. 1628. I had used the meter for some two weeks after the glass had been broken, (not a drop) and it was working perfectly. I only wanted the glass replaced. It was returned after some weeks with the glass replaced but the needle would not work properly. It was returned to you on June 16th, Santa Fe Book order No. 2004. Your reference No. 06-24-049. Upon receipt of the instrument the second time, it was just as it had been, with needle failing to go above 200. It was returned to you for the third time July 5, Santa Fe. Book order No. 2215. This is four weeks ago.

When I purchased this instrument, I kept my ~~xxx~~ Master II for a supplementary instrument, so that at least I have one meter, but to have the simple replacement of a glass take nearly three months seems a little ridiculous.

Will you please look into this matter at once and return the meter.

Very truly yours,
