Dear Miss Gilpin,

I am a graduate student at the University of New Mexico working with Professor Coke. I have become very interested in the Platinum Print and plan to do some to supplement my paper this semester. Through the help of Mr. Rudisal and Mr. Lazorik I have been able to learn enough to order most of the necessary chemicals. Also the directions in Paul Andersons book seem quite clear as to procedure .

Though one can read about a process I have always felt that a person must do something to fully understand it. Therefore I would be very honored if you would permit my wife and I to come and visit you so that I might obtain first hand knowledge from someone who has made a print. I am bursting with Questions that I can not find answers to and I am sure that you might be able to help me. Also I would like to include a section about you in my paper if you would permit it. I am hoping that if my preliminary studies prove worthwhile that I might do my graduate work in this area.

Thank you very much for reading this letter, I appreciate your time.

Sincerely,

Alan Lee Voorhees
