Dear Sirs:-

Will you please inform me if I may obtain from you a small amount of FERRIC OXALATE. I want this as a light sensitizer for the solution to make hand coated platinum prints. I have done much of this work in years gone by. I still have some Potassium Chloroplatinite and am most anxious to use it. I am finding it very difficult to find FRESH Ferric Oxalate. It must be absolutely fresh, light green flakes, otherwise the image deteriorates. I only need a small quantity, 4oz. I have been told that this is not difficult to make. I do not know its other uses, but as a light sensitizer, freshness is imperative.

If I may obtain this from you I will send my check at once. If not perhaps you can tell me where I can do so.

Thanking you, I am

Very truly yours,
