Plainview, N.Y.

Gentlemen:-

For some time I have been trying to find some Ferric Oxalate. I need this chemical for the making of hand coated platinum photographic prints. This will be used as the light sensitizer and it MUST be FRESH. A scientist at Los Alamos has given me your name and address and told me that it was listed in your catalogue at \$5. per 800 gram bottle. I enclose my check for \$.75 to include postage, and trust that you can fill this order. But I repeat in order to serve my purpose this must be fresh light greenscales.

I do not need very much and the above quantity will do very well.

Very truly yours,
