Gentlemen:-

I am very anxious to secure a small amount of Fresh Ferric Oxalate. I want this as a light sensitizer for the making of hand coated platinum photographic prints. It is necessary that this be absolutely fresh. Pale greenish flakes. You may not want to bother with such a small order for I need only about two ounces, but I have had difficulty in obtaining this chemical in a perfectly fresh state. Can you furnish me with this, or can you tell me where I may obtain it? I also want two lbs. of Potassium Oxalate (Neutral). It is some years since I have done any of this work, but I have been requested to give a demonstration for the Dept. of Photography at the New Mexico University. I have no idea of the present cost of the above, but in years past they were not expensive.

I enclose a self addressed envelope and will send my check at once when I know if you can furnish the above and the amount.

Very sincerely yours
