Dear Mr. Gasser:-

Here is one of my Medalists. Please check everything. the catch that stops the roll film at the right place is out of order, the film overlaps. Something is wrong in the flash mechanism and it wouldn't function on either flash or strobe. The springs on the roll film back are very hard to manipulate. The plate back is out of adjustment and the depth of field scale is off. I almost always use a cable release for smoother operation.

Because so many things go wrong with the mail these days, I will send the second camera a little later. I had my whole Navaho Show stolen at Kennedy Air Port, two years ago. That was air freight.

Hope that it will not be too difficult to put this back into good order again.

Sincerely
