Dear Miss Gilpin:

Forgive please the handwriting
but 16 things are going at once.

The Bottle is already acidified
as per solution "A" for
Platinum Sensitive.

My suggestion is to right away
Divide the Bottle into equal
quantities (250cc) Keep one as is
for "A" and add 1 gram
Potassium Chlorate to the other
(^{store} in a dark bottle) for "B".

If you have problems with
the performance, let me know please.

when I tested it last week it
worked fine from ABNEY'S PROPORTIONS
over

However I double coated on
gelatin sized 1 ply Strathmore.

Hope all goes forthwith and
am eager to see results.

with high regard
Charles B. Seyditz
