You will probably not agree with me when I say that the real life of the ~~West~~ cattle country has never been told in pictures. And not in one case have I seen any serious attempt to link to the early conquest of the Spanish Cattle Barons in pictures - a period full of romance and color - atmosphere, literally to throw away.

There is in Texas to-day a few ranches of over one million acres that handle wild cattle in practically the same manner as was customary over half a century ago. They will not last long - probably five years from now they too will have given way to new methods and ideas.
