

30 December 1968

Mr. Robert A. Flieder
Chief Engineer
Berkey Technical
25-15 50th Street
Woodside, N. Y.

Dear Mr. Flieder:

Thank you for your letter of December 13th giving quotations for modernizing the three interconnecting power units and making them consistent with my Model 63-552.

I accept the quotation of \$1000.00.

Because of transportation congestion during the Christmas holiday I waited until now to send the equipment to you, but it has been sent off today by express prepaid.

The shipment includes:

- 1) Three power packs
- 2) One Haliburton case containing three FT 220 lamps in housings, interconnecting cables, and battery connector cords with relay box.

As you will see the units were modified by Ascot to prevent power from one unit surging through a lamp connected to one of the other units. This arrangement is an important protection against over-loading the flash lamps.

Very truly yours,

Eliot Porter
