Dear Mr. Porter,

I am a graduate student with a B.S. in biology working for my B.A. in chemistry with the hopes of entering medical school in 1974, but a year ago I began to take and develop my own pictures. Most of my work is in black and white because I don't know much about color printing and I don't have the equipment necessary for it at the moment. I also am taking black and white in the hopes of taking excellent pictures without color so that with color they will be even better.

It was my great hopes that possibly I could meet

you sometime and see what
you think of my work and have you
possibly help teach me some of
the things that you have
learned over the years and put
together in your color prints. Nobody
puts together colors better than you,
and few photographers can see what
simple things in nature can do
in prints like yourself, and there
are many things which I see
now on my backpacking trips that are
nice in ~~color~~ black and white but would
be better in color and this is what
I wish to learn.

Perhaps you can refer me to
specific material that is the best
on the subject and this will
greatly help.

I would greatly enjoy meeting
you sometime in the future, at
your convenience, if at all
possible. I appreciate your time
in reading this letter and will
always appreciate your most beautiful
work.

Sincerely Yours,
Joun L. Lloyd, Jr.
