Mr. Eliot Porter
Route 4
P. O. Box 33
Santa Fe, New Mexico 07501

Dear Mr. Porter:

Holmes & Narver, Inc., under contract to the National Science Foundation, is responsible for the standard field materiel supply system at McMurdo Station, Antarctica. On the basis of probable needs, as established by the prospective grantees' requirements, the USARP Berg Field Center is resupplied at the beginning of each field season.

In order to ensure that the necessary field materiel is available when needed, you are requested to carefully complete the enclosed USARP Field Materiel List in duplicate and return one copy to the undersigned not later than July 25, 1975.

The form lists the items of standard field materiel that are stocked by the Field Center. Requests for additional items may be entered in the spaces provided on the form. However, the listing of additional items cannot be construed as a guarantee by USARP that they will be supplied, and such additional items may not include any items covered under the budget of your grant. You will be advised of the acceptance or rejection of additional items requested.

Any questions relating to field materiel requirements should be addressed to the undersigned, or Mr. Ervon R. Koenig, Assistant Project Manager.

Very truly yours,

HOLMES & NARVER, INC.

E. L. Herbst
