

Columns in the small scale

I

Cut a solid panel the exact height of the columns and panel. If possible remember that the column base will be added later and adjust the height accordingly.

If you are planning a colonnade all around a plaza cut all of the panels and make sure they fit with each other.

II Cut the pieces of trim and have ready.

III Paint and/or decorate the panel before you apply the trim.

IV Then begin the cutting ^{up} ~~by~~ first cutting on each side of each column

Then cut the horizontal lintel between the uprights
